                                                                                           analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                     The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16-DEC-1999; 99JP-0377484.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method (M1) for identifying a polynucleotide (I) of a microbe (M) that is expressed in vivo. (M1) comprises: (a) absorbing antibodies (Ab) against antigens that are expressed by (M) in vivo and in vitro with cells or cellular extracts of (M) that have been grown in vitro; (b) isolating unadsorbed Abs; and (c) probing an expression library of (M)'s DNA/RNA with unadsorbed Abs, where (I) that is expressed in vivo is identified. The method can be used for identifying antigens expressed during an actual microbial infection. The identified polymucleotides are useful for vaccine design, diagnostics and antibiotherapy, in particular for the diagnosis and therapy of Actinobacillus actinomycetemcomitans infection, which is the etiologic agent for localised juvenile periodontitis. The present sequence represents an Actinobacillus actinomycetemcomitans clone mucleotide sequence, which is used in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying microbial polynucleotides, useful for vaccine design, diagnostics and antibiotherapy, comprises isolating clones of a microbe's expression library reactive with antibodies against microbe proteins produced during in vivo growth -

                                                                                                                                                                                                                                                                                                                                                                                      AAX20500-21243 represent polynucleotide sequences from the genome of Treponema pallidum. The sequences can be used for detection, diagnosis, characterisation, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detecting diseases related to Borrelia infections in animals, and for the production of biosynthetic products such as enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated Treponema pallidum nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of T. pallidum infections, particularly syphilis
                                                                                                                                                                                                                                                                                                       No . .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to nucleic acid sequences (ABG67188-ABG71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in anti-Listeria vaccines.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1163020 BP; 388339 A; 197589 C; 235612 G; 341474 T; 6 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New genomic sequences from Listeria species, useful treatment and prevention of infection, also related antibodies and modulators -

The invention relates to a computer readable medium (CRM) having recorded upon it the complete H.influenzae nucleotide sequence (I), a representative fragment of (I) or a nucleotide sequence at least 99% identical to (I). By providing the full-length genomic sequence in a computer readable form, it is possible to identify commercially important nucleic acid fragments and expression modulating fragments (EMFs) of the Haemophilus genome. The EMFs can be used to regulate the expression of a nucleic acid molecule. Vectors and altered organisms comprising the predicted ORFS can be used to produce any of the polypeptide fragments of the H. influenzae Rd genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Maemophilus influenzae Rd genome medium - useful for identifying

children, pneumonia in elders, sinusitis, nosocomial infections, invasive diseases, chronic otitis media with hearing loss, fluid accumulation in the middle ear, auditive nerve damage, delayed splearning, infections of the upper respiratory tract and inflammat the middle ear. The present sequence is a version of the uncertainty.

spiratory tract and inflammation of is a version of the BASB201 coding

speech ç,

The present invention provides the protein and coding sequences of several versions of the BASB201 protein from non-typeable Haemophilus influenzae. These can be used in the production of vaccines against H. influenzae infection, which can cause otitis media in infants and

These can be used in the production of vaccines against H. influenzae infection, which can cause ottis media in infants and children, pneumonia in elders, sinusitis, nosocomial infections, or invasive diseases, chronic otitis media with hearing loss, fluid accumulation in the middle ear, auditive nerve damage, delayed speech learning, infections of the upper respiratory tract and inflammation of the middle ear. The present sequence is a version of the BASB201 coding

The lppB gene fragment was taken from pMSII. The lppB can be used in vaccines for preventing or treating H. sommus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and request in contractions.

The process can be used in the manufacture of products containing cultures of lactic acid bacteria e.g. cheese, where the culture is lysed following the completion of fermentation. The enhanced induction of the autolysin is performed some hours after the fermentation is finished. No extra lysin needs to be added and the lysin does not need to be isolated or encapsulated. The time of lysis can be precisely controlled.

inhibition activity. The proteins may be administered to patients as vaccines, and the nucleotides may be used as part of a gene therapy regime. Diseases or conditions that may be treated using the proteins or nucleotides of the invention include autoimmune diseases; genetic disorders; haemophilia; cardiovascular diseases; cancer; bacterial, fungal and viral infections, especially HIV; multiple sclerosis; rheumatoid arthritis; pulmonary inflammation; Guillain-Barre syndrome; insulin dependent diabetes mellitus; and allergic reactions such as asthma and anaemia. They may also be used for treating wounds, burns, ulcers, osteoporosis, osteoarthritis, periodontal diseases, Alzheimer's

                                                                                                                                                                                                                                                                                                                                                           The invention relates to 40 human secreted proteins (AAY9498i-Y95020), and cDNA sequences encoding them (AAA23423-A3462). The secreted proteins of the invention include those that are thought to be only partially secreted, i.e., transmembrane proteins. The proteins of the invention may exhibit one or more activities selected from the following:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New secreted or transmembrane proteins and polynucleotides encoding them, useful for treating neurodegenerative disorders, autoimmune diseases and cancer -
                             additionally be useful as contraceptives. Nucleic acid sequences invention may be used in chromosome mapping, and as a source of diagnostic primers and probes. The present sequence represents concoding one of the 40 proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; secreted protein; cancer; tumour; cardiovascular disorder; blood disorder; haemophilia; autoimmune disease; diabetes; inflam infection; fungal; bacterial; viral; HIV, allergy; arthritis; neurodegenerative disease; asthma; contraceptive; ss.

The contigs encode the protein sequences designated ORF (open reading frame) 1 to 49, given in ABB06881 to ABB06930. The gene cluster is useful for the construction of the everninomicin antibiotic in overproducing strains, and to allow chemical modifications of everninomicin to enhance certain properties via genetic manipulation or combinational biosynthesis. The gene cluster can be used to produce genetic systems and genes encoding novel enzyme activities, and avoid the problems of low yield and quality of everninomicins produced by chemical synthesis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
Streptomyces venezuelae vep ORF1 (AAT68715) comprises the polyketide synthase (PKS) gene cluster encoding a polyene of 12 carbons (see also AAM16829-30 and AAW00918). It contains 5 PKS modules, with a 5' loading module and a 3' end domain. Each of the sequenced modules includes a keto-ACP, an acyltransferase, a dehydratase, a keto-reductase and an acyl carrier protein domain. He gene cluster was cloned using a heterologous hybridisation strategy from a genomic DNA library. A novel expression cassette encoding the first module

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ş
The invention relates to an isolated and purified nucleic acid segment CC comprising a desosamine biosynthetic gene cluster, a fragment or its biologically active variant, where the nucleic acid sequence is not CC biologically active variant, where the nucleic acid sequence is not CC derived from the eryC gene cluster of Saccharopolyspora erythraea or CC Streptomyces antibioticus. The invention also relates to a macrolide CC biosynthetic gene cluster encodes proteins which synthesise methymycin, pikromycin, neomethymycin, narbomycin or a combination of these CC compounds. Recombinant or augmented cells comprising the desosamine CC compounds. Recombinant or augmented cells comprising the desosamine CC and/or macrolide biosynthetic gene clusters are useful for the CC production of biologically active macrolides. The macrolide biosynthetic proteins are useful for synthesis of methymycin, pikromycin, compounds are useful for synthesis of methymycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikromycin, pikrom

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            biomedical applications, to engineer PHA monomer synthases or to prepare biologically active agents, such as chemotherapeutics, immunosuppressants, agents to treat asthma, chronic obstructive pulmonary disease as well as other diseases involving respiratory inflammation, cholesterol-lowering agents or macrolide-based antibiotics which are active against a variety of organisms, e.g., bacteria, including multi-drug resistant pneumococci and other respiratory pathogens, as well as viral parasitic pathogens, or as crop protection agents (e.g., fungicides or insecticides) via expression of polyketides in plants. The present sequence represents a Streptomyces venezuelae ATCC 15439 DNA sequence, designated vep ORF 1 in the specification, which actually contains 3 open reading frames, which encode proteins AAY77177-Y77178 and AAY77199. The vep ORF 1 protein is defined in the specification as a PHA monomer armthese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Match:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            B
                                                                                                                                                                                                                                                                                                                                                                          The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB33300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the blosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent W0200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; SEQ ID 1; 2504pp; French.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI, 2002-043418/06.

                                                                                                                                                                                                                                                                                                                                                                        US-10-018-706-2 (1-322) x AAI99683 (1-4403765)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AAI99683) and H37RV (AAI99682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form specification, but was obtained in electronic format at seqdata.uspto.gov/sequence.html?DocID=6294328B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 4403765 BP; 757105 A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Evaluating strain variation of Mycobacterium tuberculosis, comprise determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Rv differ -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              No.:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   monitoring.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium by determining the mucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and 137Rv (AA199682). The method is useful for evaluating strain variation M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic monitoring.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               monitoring.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=6294328B1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of several versions of the BASB201 protein from non-typeable Haemophilus influenzae. These can be used in the production of vaccines against H. influenzae infection, which can cause otitis media in infants and children, pneumonia in elders, sinusitis, nosocomial infections, or invasive diseases, chronic otitis media with hearing loss, fluid accumulation in the middle ear, auditive nerve damage, delayed speech
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated non-typeable Haemophilus influenzae BASB201 polypeptides, useful as components of vaccines for treating bacterial infection such as otitis media, delayed speech learning and inflammation of middle ea

                                                                                                                                                                                                                                                                                                                                                                      22-JUN-1998;
21-JUN-1999;
                                                                            The present sequence is a Achromobacter lyticus DNA encoding the present sequence is used in the production of altered genes which The present sequence is used in the production of altered genes which allow expression and preferably secretion of active protein in mammalian allow expression and preferably secretion of active protein in mammalian allow expression and preferably secretion of active protein in mammalian betea-lytic protease coding sequence with mammalian promoter, signal betea-lytic protease coding sequence with mammalian promoter, signal betea-lytic protease rowing sequences. The modified sequence paptide and translation initiation sequences. The modified sequence ruminants, e.g. goats, sheep, and cows. It is also used to produce transgenic animals which are resistant to staphylococcal infections.
                                                                                                                                                                                                                                                                                                                                                                                                              22-JUN-1999;

                                                                                                                                                                                                                                                                   AAX20248 to AAX20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relagsing fever, and Lyme borreliosis, more commonly known as

Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and sendemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated Borrelia burgdorferi nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of infections, particularly Lyme disease

                        Peptidase was purified from Achromobacter lyticus by a Sepharose CL-4B column, a Sephadex G-75 column, and by reverse phase HPLC. The first 25 N-terminal amino acids were found to be identical to those of the beta-lytic protease from Lysobacter enzymogenes. The beta-lytic protease from Lysobacter enzymogenes. The beta-lytic protease for he L. enzymogenes beta-protease. The full length sequence of the L. enzymogenes beta-protease. The full length sequence of the gene encoding the A. lyticus enzyme was determined by dideoxy sequencing. The beta-lytic protease is expected to be an enzyme which can decompose not only Gram-positive See also AAQ25084-6.
